Maize Genetics Program Looking for Undergraduate Research Assistants

The Thompson lab, which studies maize genetics, is looking to hire undergraduates to help with phenotyping and seed preparation during the spring semester. Job duties will include scanning corn ears and kernels, plant maintenance in the greenhouse, inventory of seed, and other related tasks. Preferably, candidates would be interested in continuing to work in the summer to help with field research. Ideal applicants will be dependable, hard-working, detail-oriented, and looking to gain meaningful experience. Opportunities exist for undergraduate research projects for interested and skilled applicants. Starting date and number of hours worked are flexible. If interested, please send a resume to Linsey Newton at newtonL2@msu.edu.
